---

## Highlights of Qualifications:

---

- Solid networking and infosec knowledge while working with Shell PLC to ensure business continuity.
- Vital role in passing firewall audit despite being a fresher, demonstrating core firewall and compliance management skills.
- Security+ and ISC2 CC certified with penetration testing skills for practical security implementation.
- 2 years of delivering excellent client support by being a trusted advisor for business users to understand and address their needs.
- Learner mindset to foster adaptability and continuous growth for personal and professional development.
- Cultural awareness and sensitivity to foster a more inclusive environment.
- Demonstrates responsibility and reliability by taking accountability of the task assigned.
- Strong communication skills to understand and cater to clients all across the world.
- Multilingual: Fluent in English, Hindi and Punjabi to cater to various people.

## Education:

---

|                                                      |                  |
|------------------------------------------------------|------------------|
| <b>Masters in Information Technology Security</b>    | Graduating 2025  |
| Ontario Tech University, Oshawa, ON                  | <b>GPA: 3.88</b> |
| <b>Bachelors in Computer Science and Engineering</b> | 2017-2021        |
| Amity University, Noida, India                       | <b>GPA: 8.54</b> |

## Project or Lab Experience:

---

|                                 |      |
|---------------------------------|------|
| <b>Log4Shell Sandbox</b>        | 2024 |
| Ontario Tech University, Canada |      |

Technology used: Java, LDAP, Linux, Networking, Hypervisor

- Developed a standalone sandbox to exploit the Log4j vulnerability.
- Created on a minimalistic CLI system from scratch, establishing control version and dependency management skill.
- Displayed analytical skills while understanding patch notes and technical implementations.

|                                 |      |
|---------------------------------|------|
| <b>Hybrid Load Balancer</b>     | 2023 |
| Ontario Tech University, Canada |      |

Technology used: Terminal, Mininet, Wireshark, Networking

- Developed a hybrid load balancer which handles the traffic on numerous layer-3 and 4 parameters to provide higher availability.
- Took initiative as a team leader to coordinate workload distribution, mentor team members, and establish best practices, resulting in enhanced team productivity and a more efficient development process.
- Applied strong logic-building skills to systematically diagnose and resolve complex network performance issues, ensuring optimal functionality.

### **Network packet sniffer**

2021

Amity University, Noida, India

Technology used: Python, Terminal, Networking, GitHub

- Developed a command-line application in Python to sniff network packets.
- Collaborated within a team of 3 to complete assigned tasks resulting in improving time management and team management skills.
- Improved critical thinking while forming logics to parse packets in a sequential order.

## **Work Experience**

---

### **Risk and Control Analyst**

2021-2023

Shell PLC, India

- Enhanced user satisfaction by providing expert advisory services, leading to a 14% increase in positive feedback.
- Subject Matter Expert for firewall rules and policies.
- Dependable and team oriented, with a strong ability to work independently gained through team and leadership projects.
- Led firewall audit preparations, resulting in a successful audit pass.
- Proactive in taking up new tasks and providing support to other members.

### **Network Administrator Intern**

May-June 2019

ONGC, India

- Tasked with setting-up and installing network devices into the core network.
- Gained teamwork experience while helping the core team of around 9 people in their daily activities.
- Demonstrated attention to detail while checking up network traffic to look for any anomalies and false positives resulting in less network congestions and packet drops.
